MY JOURNEY

I have always been curious and passionate about design and, with the help of this, I found programming as a tool to create things that do not exist or from scratch. I learned c language from university and then I started studying and working in freelance projects as a frontend developer. Then I learned php and mysql alone from some online courses and started working at Training4u S.r.l. as a fullstack developer. I had a solid background in the technologies I already knew, I also learned some modern technologies such as Nodejs, MongoDB, React and I started a project based on internet blockchain. I followed the microservice-based architecture and installed a DevOps server internally for easy integration into VPS. I have also worked with various Google APIs and explored the world of WebGL. I am still learning new things every day and exploring the growing tech industry.

WORK EXPERIENCE

Training 4U S.r.l.

Dec 2018 – Present
